SUMMARY

Career target: Javascript developer
Work permit: Dutch work and residence permit

Having more that 5 year experience in IT industry in a Business/System analyst role I've gained a good insight of software lifecycle and problem-oriented approach to the customer needs. At my last position I had hands-on experience of web application development. Besides, my university studies gave me solid understanding of main programming concepts.

As a front-end developer, I have a basic skillset and I keep learning new technologies to cover the gaps I currently have. I am highly analytical and I'm focused on delivering solutions that are not only solving user and business problems but are also written in clean and structured code.

CORE KNOWLEDGE & SKILL AREAS

- JavaScript (ES5, ES6)
- ReactJS
- HTML/CSS
- SCSS/Sass
- Bootstrap
- jQuery
- Webpack

- NPM
- ESLint
- Git
- Jira
- BDD
- IT Business Analysis
- Agile methodologies (SCRUM, Kanban)

RELATED EXPERIENCE

Self-education, September 2016 - till now
